

Press Release 2020-04-30 – Stockholm, Sweden

The Call for Presentations for Embedded Conference Scandinavia is out now

Embedded Conference Scandinavia (ECS) is now opening up to receive contributions to this year's conference. The topics are packaged slightly different this time to add structure to the tracks, and they include: Hardware and Software Design and Verification, Connectivity and Connected Devices, Advanced Technologies and Design for Excellence.

This year Mats Andersson, Chairman of the Embedded Section of the Swedish Electronics Trade Association, is responsible for the conference program. Mats has over 30 years experience from the electronics and embedded industry and has been in various management and engineering positions.

- It is a great honour to shoulder the task of putting the program together, says Mats Andersson. - I'm hoping to build on the excellent work done by my predecessors and further develop the conference. The exciting research of finding topical keynotes and invited speakers is already well underway, continues Mats Andersson.

As in previous years the conference will consist of presentation proposals submitted by the most important companies of the industry, both Swedish and International, mixed with specially invited speakers and topical keynotes. The interest to send in contributions is usually very high and a conference committee will review and select the presentations and ensure that the program reaches a high quality standard.

ECS will this year run in parallel with S.E.E. – the Scandinavian Electronics Event, which means further backing from the entire Nordic electronics industry and a record breaking number of delegates to the conference.

The topics for 2020 are in full:

- **Hardware Design & Verification**
- **Software Design & Verification**
- **Connectivity & Connected Devices**
5G, IoT, IIoT, Cloud, Security
- **Advanced Technologies**
AI, Autonomous Cars, Machine Learning
- **Design for Excellence**
Design for Compliance
Design for Sourcing
Design for Manufacturing/Production
Design for Test

Contributions are accepted until June 1. For more information, please see our [Call for Presentations \(pdf\)](#) and visit the [website](#).

About Embedded Conference Scandinavia (ECS):

ECS is now organized in its 15th edition and has over the years developed into becoming one of Europe's largest embedded conferences. The international two-day event attracts some 2,000 participants from 25 countries and consists of a highly qualitative conference, an important exhibition with about 80 leading embedded suppliers and organizations, popular social activities and the annual Swedish Embedded Award prize ceremony.
