

Reach highest Computing Performance Levels with Server-On-Modules

Name Christian Eder

Abstract text COM Express is the most successful Computer-On-Module standard ever. And it's evolving. While latest Server CPU become embedded and reach notebook like power consumption levels the COM Express Standard is extended towards more server like features. This is realized by creating a new pinout type.
The presentation describes the new feature set of the COM Express Type 7 modules and how the new features, like 4 x 10 GBit Ethernet, impacts future embedded systems.
