

## Edge Technology - Key component for I(IOT)

**Name** Davor Tonic

**Abstract text** "(I)IOT is about communication. Communication is not simple. Edge gateways will become a key component for realizing IIOT. There are many protocols out there, some are used in IT environment and other, completely different protocols, are used in the OT (factory/industry) arena. When developing embedded IIOT products such as an EDGE gateway, you need to master them all. Listen to HMS clarifying the concepts and their views of the protocols involved in IIOT".
